

CARAMEL APPLES

An apple a day, never tasted so good! Have students core and cut into quarters several large apples. Stick a Popsicle™ stick in each apple section. Heat one large bag of unwrapped caramels in a saucepan over low heat. Add 1 or 2 tablespoons of water to thin the caramels to the desired consistency. Stir continuously while they melt. Holding on to the stick, have each student place their apple into the melted caramels. Place them on a sheet of waxed paper to cool before eating.
