Windy Crafts!

WIND SOCKS

Give each child in class a small paper bag. Ask them to cut the bottom from the bag and decorate it with various weather symbols. Instruct the students to cut six 12 inch strips of colorful tissue paper and paste them to the edge of the bottom of the bag. Punch four holes, 1/2 inch from the edge, through the top of the bag. Space the holes equally around the edge. Cut four 12 inch pieces of yarn and one 24 inch piece. Tie the four pieces of yarn to the four holes. Gather the ends together and tie with the 24 inch piece. Tie the wind socks outside to a pole and have your children observe how they twist and turn as the direction of the wind changes. Small children can hold the wind socks and run to make them fill with air.

WIND CHIMES

This fun craft also makes an excellent Mother's or Father's Day gift!

For every child in class, collect one aluminum pie tin, three 8 inch pieces of string and 30 plastic or wooden beads.

Begin by having the children knot the ends of the strings. Have them string ten beads to each string. Punch three holes in the center of the pie tin, pull the strings through the holes and tie the ends. Punch three

more holes at the edge of the bottom of the tin and attach three long pieces of string. Hang outdoors in view of a window.
